

Dendrites Season-0: How the Airdrop & NFTs Work

Season-0 is the warm-up phase for Dendrites (DNDX).

It's where early users:

- **Help us test Dendrites payment flows,**
- **Build their reputation on-chain,**
- **And lock in eligibility for future DNDX airdrops on Ethereum.**

There are three main pieces:

1. **Points – earned for quests, socials, testnets, referrals, streaks.**
2. **Access NFTs – Mission-0 + Neuron Passes that act as your identity and multipliers.**
3. **Galaxy Reward NFTs – rare badges for the top 10 / 30 / 1,000 when Season-0 ends.**

All Season-0 NFTs live on Base (L2, ERC-1155).

DNDX token and liquidity will live on Ethereum mainnet.

Season-0 points and NFTs later map into DNDX airdrop eligibility according to the final rules we publish before claim.

1. What You Can Earn in Season-0

1.1 Mission-0 – Safe Commerce Scout (Access NFT)

“I am an OG and did the basics properly.”

Mission-0 is your first on-chain badge in the Dendrites ecosystem.

It proves you’re not just a random click: you actually set things up correctly.

You earn Mission-0 when you:

- **Join the waitlist and verify your email**
- **Add an EVM wallet to your profile (Base/Ethereum-compatible)**
- **Join our community (Telegram and/or Discord, as specified in quests)**
- **Complete a small set of core social tasks (follow X, join Telegram, etc.)**
- **Make at least one public post about Dendrites (X / Instagram / TikTok, etc.) and submit the link as proof**

Once these are done and your profile passes checks, you become eligible to claim Mission-0.

1.2 Neuron Pass – Standard (Access NFT)

“I actually used Dendrites testnets at least once.”

Standard is your “I touched the product” badge.

You earn Neuron Pass – Standard when you:

- **Have Mission-0 completed / claimed**
- **Complete at least one Dendrites testnet mission, such as:**
 - **A SafetySend-style UNDO transfer on testnet**
 - **A testnet APP Escrow flow**
 - **A Predictable Gas demo, etc.**

Optional but powerful for points:

- **A short “I tried Dendrites testnet” post on X / Instagram with proof.**

Standard tells us you went beyond liking and following: you used the protocol.

1.3 Neuron Pass – Genesis (Access NFT, Limited)

“I went early + hard + deep on Season-0.”

Genesis is the highest Season-0 access tier and is deliberately scarce.

You earn Neuron Pass – Genesis if you:

- **Already hold Standard**
- **Reach a Season-0 points threshold (we’ll publish the band before snapshot)**
- **Complete multiple different testnet missions (not just a single action)**
- **Post several meaningful public updates (threads, reels, breakdowns – not spam)**
- **Reach all of the above while a hard cap of wallets is still available**
(Example: first ~3,000–5,000 eligible addresses – final number will be announced)

Once the cap is hit, no new Genesis passes will be minted for Season-0.

Late users can still earn Standard and compete for Galaxy rewards, but not Genesis.

1.4 Council / Partner Sigil (Access NFT, Manual)

“I am part of the core / partner circle.”

This is a non-farmable badge reserved for:

- **Council members**

- **Strategic partners / contributors**
- **Certain internal / ecosystem roles**

You can't grind this via quests. It's assigned manually by the team.

1.5 Galaxy Reward NFTs (Prestige)

“I was at the top of the leaderboard when it mattered.”

Near the end of Season-0, right before Presale-1, we take a global snapshot of the leaderboard.

Based on points + anti-sybil checks, top wallets receive:

- **Galaxy Crown – Top 10**
- **Galaxy Crest – Top 30**
- **Galaxy Tokenmark – Top 1,000**

These NFTs are prestige badges and may carry:

- **Extra multipliers or priority bands in the Season-0 airdrop**
- **Chances for physical / digital prizes (e.g., PS5, gaming gear, bonus allocations)**
- **Long-term recognition as the earliest power users of Dendrites**

We'll publish the exact prize / allocation structure before snapshot and claim.

2. How Points Work

Season-0 has a flexible scoring system. At a high level:

Season-0 Score \approx Points \times Tier Multipliers \times Testnet Bonus

We don't promise “1 point = X DNDX”.

Instead, points + NFTs together decide how large your slice of the Season-0 airdrop pool could be.

You earn points from things like:

- **Core onboarding**
 - **Email verification**
 - **Adding wallet**
 - **Linking Telegram / Discord**
 - **Completing Mission-0 onboarding tasks**
- **Social & community**

- **Joining official channels/groups**
- **Following and engaging with official posts**
- **Posting your own threads/reels/posts about Dendrites with proof links**
- **Participating in daily chat quests (limited per day)**
- **Testnets**
 - **Running QuickPay / SafetySend / Escrow demos**
 - **Trying new lanes as they're released**
 - **Providing feedback / bug reports (where applicable)**
- **Referrals**
 - **Inviting quality users who actually complete onboarding and testnets**
 - **(We will monitor for fake / low-quality referrals)**
- **Daily / Special quests**
 - **Daily check-ins**
 - **Event-based quests (e.g., testnet events, AMAs, collab campaigns)**

Each action has a points value that can be tuned by the team over time, and some actions might be deactivated if abused (e.g., spammy content).

3. How NFTs Affect Your Airdrop Eligibility

Your final Season-0 position is not based on points alone.

It's based on a combined signal that includes:

- **Your raw points**
- **Which Access NFTs you hold (Mission-0, Standard, Genesis, Council)**
- **Whether you hold a Galaxy reward NFT (Crown / Crest / Tokenmark)**
- **Anti-sybil / quality checks (wallet behavior, quest quality, fraud filters)**

Think of it this way:

- **Mission-0 – confirms you are a real participant, not a tourist**
- **Standard – proves you actually used testnets**
- **Genesis – proves depth + early commitment**
- **Galaxy NFTs – prove you were near the top when it mattered**

We'll publish the exact banding and formula (for example, which buckets get which airdrop ranges) before the Season-0 → DNDX claim window opens, so everything is transparent.

We will not guarantee:

- A fixed amount of DNDX per point
- Or a guaranteed minimum DNDX per NFT

Instead, we guarantee:

- Clear rules published ahead of time
- Anti-sybil checks
- A fair ranking process using the data we have

4. How Claiming Works (Product Flow)

All of this is wired into the waitlist app.

1. Sign in at waitlist.dendrites.ai
2. Complete onboarding (email, wallet, socials, community, post)
3. Go to the Rewards / Season-0 tab
4. You'll see cards for:
 - Mission-0
 - Neuron Pass – Standard
 - Neuron Pass – Genesis
 - (Later) Galaxy rewards status

Each card shows:

- Your current status – Locked / Eligible / Claimed
- A short checklist of requirements
- A Claim on Base button when you meet the requirements

When you click Claim:

- We mint the correct ERC-1155 NFT on Base to your saved wallet
- Gas is sponsored by us for Season-0 claims
- Your Season-0 status and leaderboard entry update to reflect the new NFT

Later, when DNDX is live and Season-0 mapping is ready:

- You'll use the same account / wallet to see your DNDX claim eligibility
 - Claim and vesting rules will be documented in the Airdrop & Claim section of our docs
-

5. Networks: Base vs Ethereum

To keep things fast and affordable:

- Base (L2)
 - Hosts Season-0 Access NFTs (Mission-0, Neuron Passes, Galaxy NFTs)
 - Hosts testnet and early payment flows
 - Ideal for frequent on-chain activity and experiments
- Ethereum Mainnet
 - Hosts the DNDX token and liquidity
 - Hosts the main airdrop claim once Season-0 is mapped over
 - Acts as the long-term settlement layer for value

Season-0 is where you earn position and reputation.

Mainnet is where those signals convert into real DNDX eligibility over time.

6. Timeline (High-Level)

Exact dates will be announced via the official channels, but the flow looks like this:

1. Season-0 (Now → Before Presale-1)
 - Quests, testnets, referrals, daily activity
 - Mission-0 / Standard / Genesis minting
 - Leaderboard live and updating
2. Snapshot & Galaxy Rewards
 - Announce the snapshot date/time in advance
 - Freeze the Season-0 leaderboard
 - Mint Galaxy Crown / Crest / Tokenmark NFTs to Top 10 / 30 / 1,000
3. DNDX Launch & Season-0 Claim
 - DNDX token goes live on Ethereum
 - Publish final Season-0 → DNDX mapping rules

- **Open claim window for eligible wallets**

4. Season-1 & Beyond

- **New testnets and products**
 - **New seasons and reward structures**
 - **Season-0 veterans become the earliest “inner circle” of Dendrites**
-

7. Safety & Official Links

To protect you and the project:

- **We will never DM you first asking for keys, seed phrases, or private information.**
- **Only trust:**
 - **dendrites.ai**
 - **waitlist.dendrites.ai**
 - **@Dendrites_Announcements on Telegram**
 - **The official DNDX contract address on Ethereum (published in docs and site)**

If in doubt, always cross-check an announcement with at least two official surfaces (site + docs, or docs + announcement channel).

If you’re here in Season-0, you’re very early.

Mission-0 → Neuron Pass → Genesis → Galaxy Rewards is our way of saying:

“We see you. We’re tracking your contribution.

And when it’s time to map all this into DNDX, you’ll be at the front of the line.”
